

EZbooking

EZ-Equip - Equipment Registration

Ever wanted to book a conference room equipped with a beamer and a computer? Make it possible with EZ-equip! The administration of available accessories and equipment for each object is now easy and concise thanks to the additional EZ-Equip plug-in. Every user who wants to book an object also gets an overview of all the equipment that can be booked together with that object. This way any object registered in your Ezbooking licence will be available for booking together with selected accessories. Enhance your equipment use!

Register Equipment

The administrator registers in the software any equipment which he wants to make available for the users to book. With this system, the users get a clear overview of which accessories can be booked together with the object that they need to book.

No double-booking of accessories

Since each accessory is registered once, it is not possible to double-book any of them. The same security applies for all objects booked. This will make the administrators and users feel secure about the booking software.

Link accessories to objects

The administrator connects the accessories to chosen objects. The users can then book one object (e.g. a meeting room) and choose to linking to it one or several accessories. Accessories must be connected to existing object for users to be able to book them. It is thus not possible to book accessories alone. With EZ-Equip you have a clear view of which equipment is booked or available.

Generate Reports

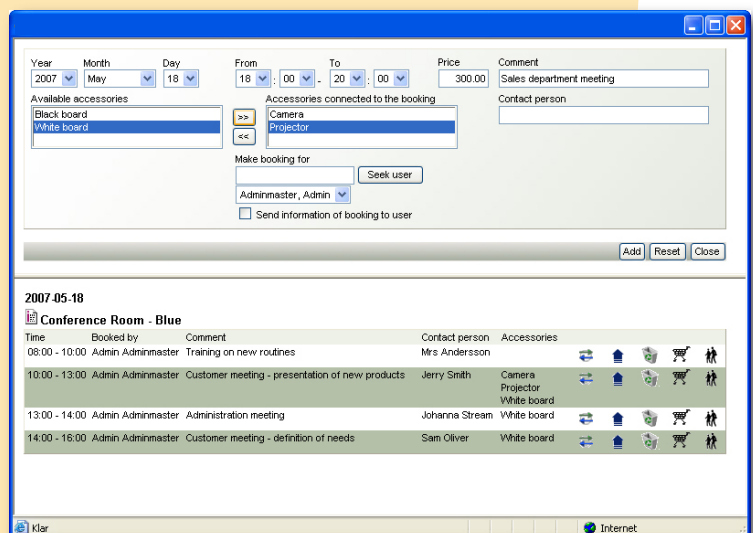

The addition of the EZ-equip plug-in makes more selections available in the existing report generators. You will thus know more about the equipment use inside your organisation. The purchase and reassignment of equipment will be eased.

The University of Zürich works with EZ-Equip

The University of Zürich is the largest University in Switzerland compound of 7 institutes. The Equipment and Logistics department, works with clinics and courses at the University of Zürich. It mainly deals with purchasing and maintaining high-technology equipment for collective use. Before they started using EZ-Equip they used a web-interface which had to be programmed manually. Only two bookings (one per morning, one per afternoon) were possible. They solved this with EZ-Booking and its plug-in EZ-Equip.

Easy handling – a benefit for the University of Zürich

At the moment 129 users are working with the software. They are divided into 40 registered departments and 5 companies. They use 35 objects and many accessories. "With EZ-Equip the Department of Equipment and Logistics of the University of Zürich achieves maximum capacity utilization and this saves money in coordinating new equipment and maintenance", says Mrs Folini, Project Leader of the Project 'Shared Equipment'. The aim of this project was to implement an overall solution for providing the users with a web-based reservation system for booking specialized equipment: "The system is stable and user-friendly, and our users learnt EZbooking and EZ-equip very easily."
