General

File encryption

It is now possible to make encryption of stored files either optional or mandatory. This applies to the following types of files:

Files in the File manager

Under *Administration > System > Settings*, you can make encryption of files stored in the *File manager* optional or mandatory. You choose one of the following options there:

Encryption of file manager files

Allowed	▼
No encrypt	
Allowed	
Enforced	

- *No encrypt*: Files are not encrypted automatically and cannot be encrypted manually.
- *Allowed*: Files are not encrypted automatically but can be encrypted manually via the *Encrypt/decrypt file* button in the *File manager*. Decryption of already encrypted files is also possible using this button.
- *Enforced*: Files are encrypted automatically and can also be encrypted manually via the *Encrypt/decrypt file* button in the *File manager*. Decryption of already encrypted files is not possible.

Upload	New folder	Search	Download	View Large icons	Cut	Copy	Paste	Rename	Delete	Encrypt/decrypt file
--------	------------	--------	----------	---------------------	-----	------	-------	--------	--------	----------------------

Survey files

Under *Administration > Surveys > Settings*, you can make encryption of stored survey files optional or mandatory.

You do this by choosing one of the following options:

Encryption of survey files

Allowed	▼
No encrypt	
Allowed	
Enforced	

- *No encrypt*: Encryption of survey files cannot be enabled.
- *Allowed*: Encryption of survey files can be enabled at the survey level.
- *Enforced*: Encryption of survey files is mandatorily enabled on all surveys.

File upload

Allowed file types ⓘ
 ...

Maximum file size (MB)

Encrypt files ⓘ ☒

Under the *Administration > Surveys > Survey files* menu, users with the appropriate permissions can search for a survey to view which files it has of the following types:

- Paper survey files
 - Uploaded PDF files containing scanned paper surveys
 - Image files containing text answers and pages
- Files uploaded to a survey with the question type *Attachment*
- Voice recordings in the question type *Video*

If the setting above is set to *Enforced* or *Allowed*, you can use the *Encrypt/decrypt file* button to choose to encrypt a specific file. If the setting *Allowed* is selected, you can also choose to decrypt an already encrypted file. Encrypted files are displayed with a padlock icon next to the file name. To select more than one file, hold down the "Ctrl" key while clicking on the files you wish to encrypt/decrypt. It is also possible to select an entire group of files by simply clicking on the group's heading, e.g. *Attachments* or *Voice recordings*.

Surveys

Survey-specific access

You can now assign survey-specific access to authorised users added to a survey.

Next to each authorised user, there is a dropdown where *Regular permissions* is selected by default. This means that the user's permissions on the survey are those derived from their membership in their user group(s). If you have created at least one so-called survey-specific access under *Administration > Surveys > Survey-specific access*, you can select one such access from the dropdown. If a survey-specific access is selected, the permissions defined by it will apply to the user on this particular survey, instead of the regular group permissions. This is a way to grant a user either more or fewer rights on the current survey than they normally have.

Authorised users ⓘ

John Doe	Regular permissions	ⓘ	
Jane Doe	Access to the respondent list only	ⓘ	

Add users

Under *Administration > Surveys > Survey-specific access*, the survey-specific permissions are created and edited. Here you can specify survey permissions corresponding to those that can be set per user group, covering access to the sub-menus of the

Survey menu, Survey actions, and Other survey settings.

Reports

New report type: Presentation

As part of the plugin SR-Advanced Report, the report type *Presentation* is now available.

A presentation report does not need to be linked to a survey, and no content is generated automatically. In other words, with this report type you can design entirely on your own how your report should look. You add the presentation report's content yourself in an editor, and you can also insert the layout and scripts you wish. A presentation report can be useful if you want to design a report yourself, without it necessarily having to include the tables and charts that are typically generated automatically from the survey results.

You can assign the desired user groups the right to create and manage presentation reports. These users will then get an additional option, *Presentation*, in the *New report* wizard, as well as access to the desired menus under the *Reports* menu. The permissions are assigned on the *Presentation* tab in the group rights.

Response rate

Results by area

Below, all three areas are displayed side by side. Each question has a ball scale (1–5) that visually shows the average, as well as a distribution chart showing how the answers are distributed.

Motivation

Områdesmedelvärde: **3,87**

Mitt arbete känns meningsfullt

Jag lär nytt och utvecklas i mitt arbete

Jag ser fram emot att gå till arbetet

Management

Områdesmedelvärde: **3,70**

Jag är insatt i min enhets/motsvarande mål

Min enhets/motsvarande mål följs upp och utvärderas på ett bra sätt

Jag vet vad som förväntas av mig i mitt arbete

Leadership

Områdesmedelvärde: **3,83**

Min närmaste chef visar uppskattning för mina arbetsinsatser

Min närmaste chef visar förtroende för mig som medarbetare

Min närmaste chef ger mig konstruktiv feedback

Summary – Strengths & areas for development

Strengths – Maintain & develop

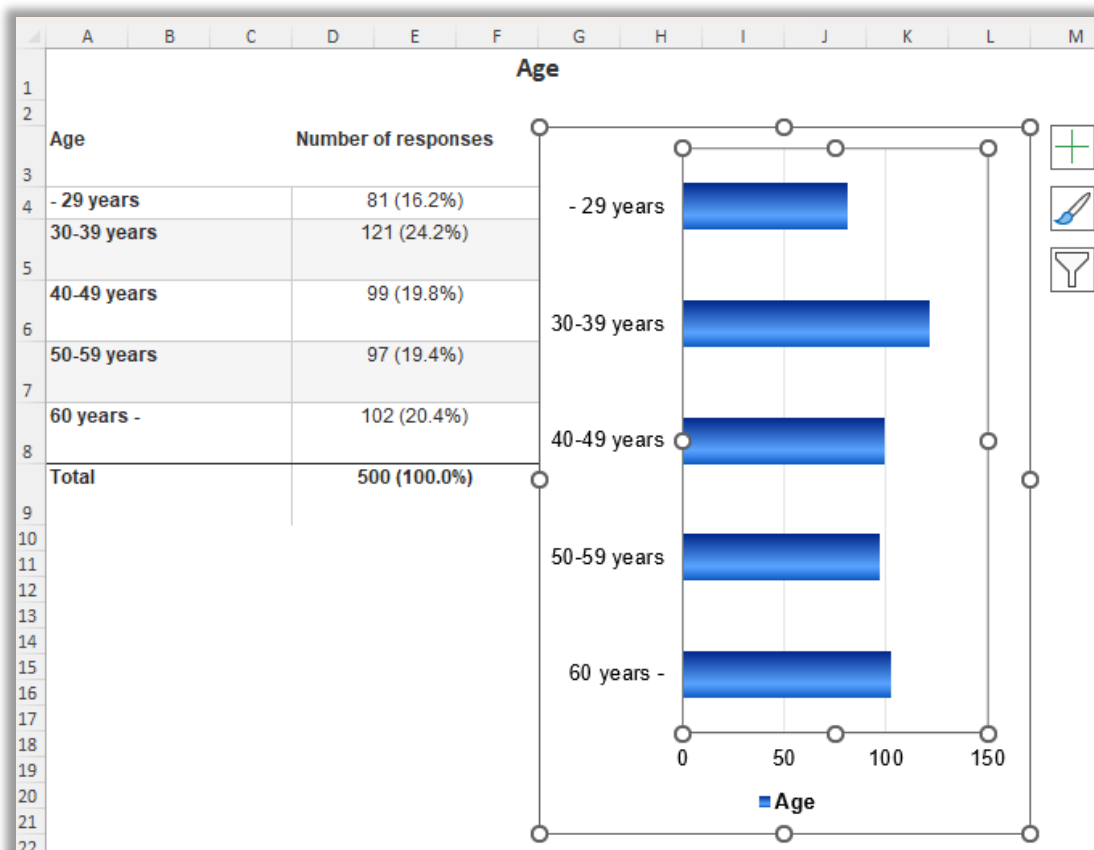

Min chef ger konstruktiv feedback	4,1
Mitt arbete känns meningsfullt	4,0
Jag ser fram emot att gå till arbetet	3,8

Areas for development – Continue working

Mål följs upp och utvärderas på bra sätt	3,6
Jag vet vad som förväntas av mig	3,7
Min chef visar uppskattning	3,7

Extended export format: Excel

Previously, report datasets could already be exported to Excel. In this version, we have added the ability to also export the report content to Excel. The report's charts are converted to Excel charts during export, which can be edited in Excel as needed.

New API requests for hiding questions no one has seen/answered when creating a report via API

The API method for creating a report from an SRReport object – POST: /Services/Api.svc/{format}/Reports – now has two new optional query string parameters:

- `excludeUnansweredQuestions` – Set the value to "true" if you want to exclude the survey questions that no respondent has answered.
- `excludeUnseenQuestions` – Set the value to "true" if you want to exclude the survey questions that no respondent has seen.

LTI

Enabling display of individual reports in the LMS tool

In the automation settings for the survey template, there is an option to specify that reports should be created automatically, as well as whether they should be shown to teachers and/or students in the LMS tool.

It is now possible to choose that manually created reports linked to LTI surveys should also be displayed in the LMS tool. This applies to both standard reports and the new report type Presentation (but not aggregate reports).

The settings are found in standard reports under Report > Distribution > Main report and in presentation reports under Report > Distribution > Settings. Note that the settings are only visible when the report is published publicly via a link.

New setting for requiring recurring authentication

If you have chosen in the LTI configuration that authentication should take place via an endpoint, it has until now only required that the user authenticates the first time. If your federated login is set up to, for example, update *Organisation* at login, and you want this to also apply to users who only log in via the LMS tool, you can now configure that repeated authentication is required: *Monthly*, *Daily*, or *Always* (at each login).
